PURPOSE

- To support and improve the recovery process for elderly patients that require extended rehabilitation after suffering an injury.
- Incorporating Universal Design and working closely with the patient, physical therapist, social worker, discharge personnel and the patient's family, we provide product information, itemized pricing and if requested, perform recommended home modifications. The modifications will allow the patient to recover in their own home.

BENEFITS

- Rehabilitation at home can result in a speedy recovery for the patient.
- Universal Design allows for temporary or permanent modifications and can be used by other family members regardless of their age or physical ability.
- A modified house does not have a hospital 'feel' - 'It's home.'
- Home modifications help family members and caregivers.
- Medical facilities will have more beds available for patients in need.
